

1. The Inbound Message Flow

Every time a customer messages your WhatsApp number, the agent follows this sequence:

Step	What Happens
1	Message arrives from customer
2	Hard opt-out keyword check — instant, no AI needed
3	AI classifies intent + returns confidence score (0.0–1.0)
4	Confidence gate decides action level (auto / suggest / escalate)
5	Route by intent: auto-reply, notify owner, or both
6	Event logged to log.csv with timestamp, intent, tokens, confidence

Tip: Unknown numbers (not in your contacts list) are handled normally — treated as new leads at stage: new.

2. Confidence Thresholds

The AI returns a confidence score (0.0–1.0) with every classification. This score controls what the agent does:

Score Range	Level	Agent Behaviour
0.75 and above	HIGH	Auto-acts immediately. Sends reply or takes action. Notifies you with AUTO tag.
0.45 – 0.74	MEDIUM	Does NOT auto-reply. Notifies you with a suggestion. Tagged REVIEW — your call.
Below 0.45	LOW	Escalates to you without acting. Tagged HUMAN — customer is waiting.

Note: REVIEW = agent already handled it, keeping you informed. HUMAN = customer is waiting — reply with !send or !sendnoai.

3. Intent Reference — All 11 Categories

The AI classifies every inbound message into exactly one of these intents:

Intent	Triggers On	Auto-Reply?	Owner Alert
--------	-------------	-------------	-------------

GREETING	"Hello", "Hi", first contact with no specific ask	YES — welcome + intro	AUTO
QUESTION	Specific question answerable by your FAQ or website	YES if confidence >=75%	AUTO or HUMAN
HOT_LEAD	Pricing, "how to sign up", "I want this", buying signals	YES — calendar link sent	REVIEW — follow up fast
CALL	"Can we talk?", "book a call", "speak to someone"	YES — calendar link sent	REVIEW
DEMO	"Show me a demo", "how does it work", "can I try it"	YES — starts demo flow	AUTO
COMPLAINT	Upset tone, "not working", "frustrated", angry messages	YES — sending reply only	HUMAN — resolve personally
BOOKING_CONFIRMATION	"Confirmed", "I'll be there", "see you then"	YES — booking confirmed	AUTO — stage set to booked
REFERRAL	"My friend wants this", referral language	YES — thank-you reply	HUMAN — follow up
ACKNOWLEDGEMENT	"Ok", "thanks", "got it", thumbs up	NO	AUTO — no action needed
PERSONAL_CONVERSATION	Sounding personally, not a business inquiry	NO	REVIEW — your call
WRONG_NUMBER	Message clearly meant for someone else	NO	AUTO — tagged wrong-number

4. Opt-Out Handling

Opt-out works on two paths — a fast keyword bypass (no AI) and a soft AI-detected signal.

Hard Opt-Out Keywords (Instant Bypass)

If any message contains these exact phrases, the contact is immediately tagged inactive — no AI, no delay, no second chance:

stop messages	stop messaging	stop texting
stop contacting	unsubscribe	remove me from
opt out		

Important: A bare "stop" does NOT trigger opt-out — intentional, to avoid accidental drop-off. Multi-word phrases are required.

Soft Opt-Out (AI-Detected)

If the AI detects reluctance ("not interested", "no thanks") but confidence is below 75%, the agent:

- Sends a gentle confirmation asking them to reply STOP MESSAGES to confirm
- Notifies you with a REVIEW alert — no changes made yet
- Only tags inactive after they confirm with a hard opt-out phrase

5. What the Agent Will and Won't Do Automatically

WILL auto-reply	WILL NOT auto-reply
Greetings	Complaints — always your responsibility
KB-matched questions (75%+ confidence)	Questions with no KB match
Hot lead — sends calendar link	Personal conversations
Call request — sends calendar link	Wrong number (no reply sent at all)
Demo flow launch	Low-confidence messages below 45%
Booking confirmations	Anything needing human judgement
Referral thank-you	
Opt-out confirmation	

Tip: The agent includes an AI-generated suggested reply in every HUMAN and REVIEW notification. Use !sendnoai to send it as-is or with edits.

6. Reading Owner Notifications

Notifications arrive on your WhatsApp in this format:

Example — HOT LEAD notification:

[REVIEW] HOT LEAD from **John Smith** (12425551234) Message: *"How much does this cost? I want to get started."*
 Calendar link sent. **AI Assessment:** John is ready to buy — strong buying signal. **Suggested Reply:** *"Hey John! Great timing — I just sent you a booking link. Pick a slot and we'll walk you through everything!"* Send with: !sendnoai 12425551234 [paste edited reply]

Tag	Meaning	Action Required
AUTO	Agent handled it completely	None — review only if you want to follow up
REVIEW	Agent handled it, flagging for you	Read it — act if you see an opportunity
HUMAN	Customer waiting — agent can't help	Reply with !send or !sendnoai ASAP

7. Contact Stage Progression

The agent automatically updates a contact's funnel stage based on what they send. Stages only move forward — never reset automatically.

Stage	Set When	Effect
new	Contact first created	All intents treated as first contact

exploring	HOT_LEAD or CALL intent detected	Demo nudge added to replies
demo	DEMO intent detected	Demo flow launched in chat
booked	BOOKING_CONFIRMATION detected	Owner notified of confirmed booking
customer	Set manually via contacts.html or !addcontact	Full customer context passed to AI
wrong-number	WRONG_NUMBER intent detected	No further auto-replies sent

Tip: Set a contact's stage manually by editing their tags in contacts.html — use stage:customer, stage:booked, etc.

8. Troubleshooting Inbound Issues

Problem	Likely Cause	Fix
Message classified as OTHER	Phrasing doesn't match any intent pattern	Check terminal for reasoning. Add a KB entry for recurring question types.
KB question not auto-answering	Low match confidence — phrasing mismatch	Revrite the KB question to match how customers actually phrase it.
Agent not responding to inbound	Agent disconnected or not running	Check the terminal. Send !status. If no response, restart via start.command.
Opt-out not triggering	Customer used bare "stop" not a full phrase	Ask them to reply STOP MESSAGES to confirm opt-out.
Too many HUMAN alerts	KB is missing common questions	Add more FAQ entries via !setup (step 9+) to increase auto-answer rate.
Message from unknown number not handled	Not handled — check log.csv	Unknown contacts are treated as new leads. Use !addcontact to track them.
