

1. What Is OutreachBey?

OutreachBey is a WhatsApp AI outreach agent built for small businesses in Nassau, Bahamas. It runs on your Mac, connects to your WhatsApp number, and does two things:

- **Outbound:** You send AI-written messages using simple commands from your own WhatsApp.
- **Inbound:** It automatically reads and classifies customer messages, auto-replies where it can, and alerts you when your attention is needed.

Tip: OutreachBey is not a web app or cloud service. Everything stays on your Mac — contacts, messages, and logs are all local CSV files.

2. Getting Set Up

Step 1 — Start the Agent

Double-click **start.command** in the project folder. A terminal window opens and you'll see a QR code.

Step 2 — Scan the QR Code

On your phone, open WhatsApp → Settings → Linked Devices → Link a Device. Scan the QR code in the terminal. The agent will print *"Agent is live!"* when connected.

Step 3 — Run the Setup Wizard

From your own WhatsApp number, send:

```
!setup
```

The wizard walks you through 18 steps: business name, tone, signature, calendar link, knowledge base entries, and more. You can re-run it anytime — it never erases your existing settings.

Tip: You can cancel the wizard at any time by sending `!cancelsetup`

3. Owner Commands

All commands are sent from **your own WhatsApp number** to yourself. Only messages from your registered owner number are treated as commands.

Command

What It Does

<code>!send [name/number] [note]</code>	AI writes and previews a message. You approve before it sends.
<code>!checkin [name/number]</code>	AI writes a follow-up check-in message for approval.
<code>!sendnoai [name/number] [message]</code>	Send a message exactly as written — no AI, no preview.
<code>!broadcast [tag]</code>	AI writes a campaign message to all contacts with that tag.
<code>!schedule [name] [time] [note]</code>	Schedule a message to send later (e.g. "tomorrow 9am").
<code>!addcontact</code>	Add a new contact via a guided step-by-step menu.
<code>!followuplist</code>	Lists contacts not messaged in 30+ days — your cold pipeline.
<code>!report [days]</code>	WhatsApp digest: messages sent, inbound, hot leads, tokens used, AI cost.
<code>!stats</code>	Quick snapshot of all-time totals.
<code>!help</code>	Full command reference sent to your WhatsApp.

Tip: For `!send` and `!checkin`, you'll first choose a purpose (1–5), then see a preview. Reply yes to send or no to cancel.

4. How Inbound Messages Work

When a customer messages your WhatsApp number, OutreachBey classifies their intent using AI and routes it automatically:

Intent	What Happens
GREETING	Auto-replies with a welcome + one-line business intro + how can we help.
QUESTION	Checks your knowledge base. If matched at 75%+ confidence, auto-answers.
HOT_LEAD	Sends calendar link. Alerts you immediately with AI assessment.
CALL	Sends calendar link. Notifies you to follow up.
DEMO	Starts an interactive demo flow in the chat.
COMPLAINT	Sends a holding reply. Escalates to you — never auto-resolved.
OPT_OUT	Tags contact inactive. They will never be messaged again.
BOOKING_CONFIRMATION	Confirms booking, updates contact stage to 'booked'.
REFERRAL	Sends thank-you reply. Flags for personal follow-up.
OTHER	Notifies you with an AI-suggested reply for your review.

Owner Notification Types

Alert Type	Meaning
--------------------------------------	-----------------------------------

AUTO	Agent acted automatically. No action needed unless you want to follow up.
REVIEW	Agent handled it but flagged something for your awareness.
HUMAN	Agent needs you. Reply using !send or !sendnoai.

5. Dashboard & Contact Manager

dashboard.html — Business Intelligence

Open **dashboard.html** in your browser (served via Python: `python3 -m http.server 5173` then visit `localhost:5173/dashboard.html`).

Auto-loads your log file and shows:

- KPI cards: messages sent, inbound, hot leads, opt-outs, complaints, tokens used
- Bar charts: messages by day, by intent, by contact
- Hot lead velocity: minutes from hot signal to outbound reply
- Opt-out trend: weekly rate chart with 10% alert threshold
- Message effectiveness: % of outbounds that received a reply within 24h
- Activity feed: live log of recent events

contacts.html — Contact Manager

Open directly in your browser — no server needed. Features:

- View, edit, and export all contacts
- Engagement scores (1–10) per contact based on stage, recency, and data completeness
- Pipeline funnel: Lead → Prospect → Demo → Customer, with stuck-30d warnings
- Tag contacts as vip, client, lead, inactive, or custom tags

Tip: Tag a contact 'inactive' to permanently opt them out of all future messages.

6. Writing Good Knowledge Base Entries

The KB (knowledge base) is how OutreachBey auto-answers customer questions. You set up to 20 FAQ entries in the !setup wizard or directly in settings.csv.

Do this:

- Write questions in natural customer language: *"How much does this cost?"* not *"Pricing"*
- Be specific in answers — include actual prices, hours, or locations where relevant
- Cover Bahamian dialect variants: *"What y'all does do?"* matches *"What do you do?"*
- Keep answers under 80 words — they're sent as WhatsApp messages

Avoid this:

- Vague questions like "Info" or "Services" — the AI won't match them reliably
- Sensitive information in KB fields — these are sent to the AI provider on every request
- Duplicate questions — each entry should cover a distinct topic

Tip: If a customer's question isn't being auto-answered, rewrite the KB question to more closely match how your customers actually phrase it.

7. Getting Help

Resource	How to Access
Full command list	Send !help from your WhatsApp
Setup wizard	Send !setup from your WhatsApp (safe to re-run)
Architecture & code	docs/ARCHITECTURE.md in the project folder
Privacy policy	docs/PRIVACY.md in the project folder
Setup guide	docs/SETUP.md in the project folder
GJC Digital support	gjamescollie@gmail.com
